- Weighted ground fish coming off fishing vessels for fishery distribution world wide. Responsible for preparation of multiple records for fisherman, buyers and State and Federal Fish & Game departments.
- Assisted in shipping Uni for International and Japanese markets. Kept inventory flowing and supplied components to maximize efficient flow and process on the line.

Self Employed, Specialized Labor Mendocino Coast

September 2004 - Current

Provide specialty labor services to coastal residents in following areas:

- Computer repair (desktop & laptop) and specialized data recovery projects
- Electrical and communication wiring, including installation of security systems
- Caretaker of private property, including the restoration of woodland areas and invasive species removal
- Extensive restorative work on century old historical home on the Ten Mile River
- Landscaping and gardening, home and garden equipment maintenance and repairs, and miscellaneous structural repairs
- Seasoned automotive mechanic with specialized experience in repair of diesel engines
- Framing of houses as a carpenter

ComonSenseComputing, San Francisco, CA

June 2001 – August 2004

Owner/Operator of a computer Data/System/Network recovery business, services included:

Provided complete computer services for a number of small offices including law firms, real estate offices, medical professionals, insurance offices and small corporate clients in north San Francisco and surrounding areas.

- Recovered data from hard drives for professionals such as Physicians, Attorneys, small corporate clients and businesses.
- Designed and installed wired and wireless computer networks for small businesses and offices.
- Designed computers and systems for proprietary clients such as visual and graphics artists, forensic sound recovery lab, music composers. Designed and built high system fault tolerance file servers for clients who had the critical need of insuring 100% up time without suffering data loss.
- Established and implemented security on intra networks, inter networks and file servers
- Set up home business computers for client's proprietary use.
- Educated clients and end users in the use of computers, software and security to enable them to maximally employ the technology they possessed.
- Repaired desktop, servers and laptops to component level and replaced failed components if economically feasible.

Hewlett Packard, Network Server Division, Roseville, CA

July 2001 – December 2001

Server Technician (Build Department)

Diagnosed and repaired problems with multi processor servers after their manufacture to enable them to be loaded for corporate clients such as the New York Stock Exchange, AOL, GM, Ford, Yahoo, etc

- Ran tests on newly built servers to identify cause of dysfunction. Formed and tested hypothesis derived from information gleaned from tests to determine which subsystem was faulty and replace defective component(s).
- Looked for patterns in failed components so manufactures could be notified of operating and engineering problems with specific components and sub-systems for correction.
- Met with management on weekly basis to discuss problems and offered suggestions to improve product quality, reliability and increase speed of production.
